

Skatlaz Server AI 2.0 Beta - Documentation

Overview

Django-based generative AI server with administration, RAG, agents, Ollama, Google Gemini, WebDiver and LoRA/QLoRA package generation for Ollama export.

Architecture

User question -> Agent -> RAG/WebDiver -> LLM provider -> Database logs -> Answer.

Administration

The Django Admin manages LLM providers, prompt templates, agent categories, RAG collections, documents, WebDiver tasks, datasets, LoRA/QLoRA jobs and chat sessions.

RAG

Upload TXT, CSV, JSON, HTML, PDF and DOCX. Index with `/ai/rag/index-source/` or `python manage.py skatlaz_index_rag`.

WebDiver

Create tasks with URL and type `_text`, `_html`, `_filter` or `_download`. The result can feed a RAG collection.

LoRA/QLoRA

Django generates a QLoRA script and Modelfile. Real training should run outside the web process, in a worker or GPU machine.

Comandos / Commands

```
pip install -r requirements.txt
python manage.py migrate
python manage.py createsuperuser
python manage.py skatlaz_seed_ai
python manage.py runserver
```
